# WeatherGlass quick reference

Settings: hold UP/MENU, Watch Face, Customize. Turn your wrist until the pointer hand points at the sun: the 12 triangle is then true north. Full guide: WeatherGlass User's Guide.

## WeatherGlass at a glance

Each box says what the item is, how it works, and when it shows or hides. Sample data; Stamford selected, compass card in use (sun hand and bearings).

**Forecast**
12-hour forecast from pressure, its 3-hour trend, wind and season. Says ALTITUDE CHANGED or SPIKE GUARD ON when the trend can't be trusted.

**Pressure trace**
Last 3 hours. Green steady, amber quick (3.6-6 hPa in 3 h), red very rapid (over 6). Grey: trend unknown.

**Pressure**
Sea-level pressure in hPa (or inHg), coloured like the trace; ---- until the watch has a reading. A logged air temperature sits just right of it, in cream.

**Port, position or moon**
Your port, or your position to the minute: green with Port Auto, amber over a named port. No port: the moon's phase. The pub pint or Frans hand can take this spot.

**Compass letters**
E, S and W beside the 3, 6 and 9 while the compass card is in use (setting: or in their place). The 12 triangle is north.

**Rise and set bearings**
Small ☉ and ☽ where the sun and moon rise and set on the horizon: yellow sunrise, orange sunset, bright and dim silver for the moon.

**Date, UTC and local time**
Day, date and UTC above; local time large below. The pub reminder's pint or Frans mode's hand can briefly replace the time.

**Steps (thin arc, left)**
Fills up from 7 o'clock, full at 20,000, with a mark at 10,000. Setting: thin arc, long ticks, ticks or arcs.

**High and low water**
Blue crest: next high water. Blue trough: next low water. For your port, or the nearest port when the face has a position. The crest fills green toward springs.

**Sea state (D number)**
Douglas sea state 0-9, in its own colour. D3 obs: logged. Plain D3: worked out from recent wind and the sea fetch setting.

**Heart rate**
Current bpm and a 1-hour trace, coloured by training zone: green to zone 3, amber zone 4, red zone 5.

**Battery (thin arc, right)**
Fills up from 5 o'clock; red below 20 %.

**Pointer hand (sun compass)**
Points at the sun, ☉ at its tip; at night at the moon, ☽. Turn your wrist until it points at the sun: the dial is then a true, north-up compass.

**Sunrise and sunset**
Yellow half-sun: next sunrise. Orange: next sunset. At their clock times; a quarter larger with the thin arc.

**Moonrise and moonset**
Bright moon: next moonrise. Dim moon: next moonset. Drawn in today's phase; an outline circle near new moon.

**Wind (triangle)**
Points in from where the wind blows; knots inside. Green under 17 kn, amber 17-27, orange 28-33, red 34+. Optional barbs.
